

1 and 4 hour trading strategy

Brought to you by Anth Goodings &  
Danny O'Donnell

Simplicity is the key to everything

# What we look for as guidance

1. candle breaks above or below both emas and closes in this position
2. we look for nearest high or low to set our Fibonacci
3. we wait for a rejection of a fib level
4. when we get a rejection we place our buy or sell
- 4.5 place stop loss same as you would on scalping strategy
5. take to tp of -27 or -61
- 6 put a pic of me and anth in your house and thank it every day as tribute

Now lets look at some examples

Break and close above

Now we look for fib

We have our rejection now of fib level so we place our trade and target

Nice and smooth all the way to target

Now lets look at another example

As you can see we had a break and close below

So we placed a fib and now have a rejection so we placed our sell

As you can see we went straight to target

This strategy is very simple so there isn't much explanation to it

so lets cover again what we look for

1.candle breaks above or below both emas and closes in this position

2. we look for nearest high or low to set our Fibonacci

3. we wait for a rejection of a fib level

4. when we get a rejection we place our buy or sell

4.5 place stop loss same as you would on scalping strategy

5. take to tp of -27 or -61

Personally if you want nothing but winners usdjpy 4hr chart is simply beautiful

We have now attached plenty of examples of this strategy

This is just a couple of examples

I will attach more in a file in the whatsapp group for you to study on your own

I hope this strategy helps you guys
